

File Manager Information

1. Log into inmotion hosting
2. In the “pizzazz-group.com” section click on “Root WHM”
3. Next click on “List Accounts”
4. Go to the cPanel of the domain you are wanting to access
5. Once you are in the cPanel, scroll down to the “Files” section and click on “File Manager”
6. This will open up a new window for the cPanel File Manager
7. Within the file manager, you will have access to all the websites files
8. We mainly use the file manager to perform our manual backups, however the file manager has wide range of uses
9. The “public_html” folder is where most of the WordPress content is stored
10. It will house your database, wp-content folder and wp-config.php file which are just a few of the many files we can access
